

WWW.NEVERFAILGROUP.COM
PREDICT · PROTECT · PERFORM

Business dependency on IT systems has never been greater, so when things go wrong the impact can be catastrophic.

Neverfail is the expert in delivering Business Continuity software which makes mission-critical systems resilient and reliable without breaking the bank. Out-of-the-box and auto-configuration combined with monitoring and automated failover means that if an IT system fails the business service remains available no matter what the time of day

Neverfail provides High Availability and Disaster Recovery out-of-the-box designed to let your business run 24x7 without major investments in costly resources.

THE NEVERFAIL CONTINUOUS AVAILABILITY SUITE

FEATURES & BENEFITS

Failover & Switchback

Protection against planned and unplanned outages. Keep users connected and carry on running, even when switching back

Physical & Virtual

For today's and tomorrow's platforms. Provide business continuity for physical and virtual applications. Leverage the cloud for the future

SCOPE

Server Check, Optimization and Performance Evaluation. Keeping an eye on system health

Bandwidth Optimization

Bandwidth optimization across LAN and WAN. Network costs are no longer a barrier

Continuous Data Protection:

Return to a single point in time. Protect against data corruption without resorting to backup

Application Availability

The Application Management Framework gives focused Protection for the heart of business.

User Experience

No disruption from IT downtime. Business processes carry on working.

Fault Avoidance

Availability not recoverability. Predict issues and threats to avoid downtime

Out Of The Box

Rapid implementation and low cost of ownership. Embedded policies and rules provide maximum protection with minimum effort

Automation

Set and forget protection. Ensure 24x7 availability without the 24x7 operations management costs

WHY NEVERFAIL

- ◆ Business continues with uninterrupted access to mission-critical applications despite IT outages
- ◆ Secures application level High Availability and Disaster Recovery in LAN and WAN environments
- ◆ Affordable, rapidly installed and easy to use – delivering quick return on investment
- ◆ Provides seamless automated or manual Failover and Failback, Switchover and Switchback

- ◆ Extensive monitoring of entire environment: network, software, hardware (hardware agnostic)
- ◆ Proven solution – protecting thousands of servers worldwide
